

# A8s-N

## **Receiving Card**

# **Specifications**

### **Change History**

Document Version	Release Date	Description
V1.4.1	2025-03-31	<ul> <li>Updated the max load capacity description.</li> <li>Updated the description for upload coefficients.</li> <li>Updated the storage environment temperature range.</li> </ul>
V1.4.0	2024-08-16	<ul> <li>Updated the max load capacity information.</li> <li>Updated the description for the Mapping feature.</li> <li>Updated the dimensions diagram.</li> </ul>
V1.3.2	2023-12-30	Updated product feature descriptions.
V1.3.1	2022-12-27	<ul> <li>Updated the description of the maximum resolution.</li> <li>Updated the low latency description.</li> <li>Updated the dimensions diagram.</li> <li>Updated the packing box dimensions.</li> <li>Deleted LVDS transmission.</li> </ul>
V1.3.0	2022-11-01	Updated the appearance diagram.

#### Introduction

The A8s-N is a high-end full-featured small receiving card developed by NovaStar Tech Co., Ltd. (hereinafter referred to as NovaStar). Supporting the exclusive Image Booster technology of NovaStar, the A8s-N can precisely calibrate the color gamut and grayscale of the screen, and improve the grayscale by 64 times. With other various functions, such as HDR, Pixel Level Brightness and Chroma Calibration, Quick Adjustment of Dark or Bright Lines, Low Latency, 3D, Individual Gamma Adjustment for RGB, 90° Image Rotation, and Free Image Rotation, this receiving card can greatly improve the brightness, grayscale and color performance from every aspect, offering users an ultimate visual experience with a uniform, smooth and lifelike image.

The A8s-N uses high-density connectors for communication to limit the effects of dust and vibration, resulting in high stability. It supports up to 32 groups of parallel RGB data or 64 groups of serial data (expandable to 128 groups of serial data). Its reserved pins allow for

custom functions of users. Thanks to its EMC Class B compliant hardware design, the A8s-N has improved electromagnetic compatibility and is suitable for various on-site setups that have high requirements.

- For PWM driver ICs, the maximum load capacity per card is:
  - 512×384@60Hz (For 8bit video sources)
  - 512×256@60Hz (For 10bit and 12bit video sources)
- For common driver ICs, the maximum load capacity per card is:
  - 384×384@60Hz (For 8bit video sources)
  - 384×256@60Hz (For 10bit and 12bit video sources)

### 🖹 Note

When working with COEX controllers and 10bit video sources:

- For PWM driver ICs, the maximum load capacity per card is 512×384@60Hz.
- For common driver ICs, the maximum load capacity per card is 384×384@60Hz.

#### Certifications

RoHS, EMC Class B

If the product does not have the relevant certifications required by the countries or regions where it is to be sold, please contact NovaStar to confirm or address the problem. Otherwise, the customer shall be responsible for the legal risks caused or NovaStar has the right to claim compensation.

#### Features

#### **Improvements to Display Effect**

- Image Booster (Effects depend on driver IC)
  - Color Management: Support standard (Rec.709 / DCI-P3 / Rec.2020) and custom color gamuts, enabling more precise colors on the screen.
  - Precise Grayscale: Individually correct the 65,536 levels of grayscale (16bit) of the driver IC to fix the display problems at low grayscale conditions, such as brightness spikes, brightness dips, color cast and mottling. This function can also better assist other display technologies, such as 22bit+ and individual gamma adjustment for RGB, allowing for a smoother and uniform image.

- 22bit+: Improve the LED screen grayscale by 64 times to avoid grayscale loss due to low brightness and allow for a smoother image with more details in dark areas.
- HDR
  - Support HDR10 and comply with the SMPTE ST 2084 and SMPTE ST 2086 standards.
  - Support HLG.
- Pixel Level Brightness and Chroma Calibration

Work with NovaStar's calibration system to calibrate the brightness and chroma of each pixel, effectively eliminating differences and enabling high consistency for both brightness and chroma.

Quick Adjustment of Dark or Bright Lines

The different brightness of seams caused by splicing of modules or cabinets can be corrected to improve the visual experience. The correction is easy and takes effect immediately.

• Low Latency

For PWM driver ICs, the latency of video source on the receiving card end can be reduced to 1 frame. To use low latency with DCLK continuous PWM driver ICs, a customized firmware is required.

• 3D

Work with the controller that supports 3D function to enable 3D output.

• Individual Gamma Adjustment for RGB

Working with NovaLCT and the controller that supports this function, the receiving card supports individual adjustment to red gamma, green gamma and blue gamma, which can effectively control image non-uniformity at low grayscale conditions and white balance offset, allowing for a more realistic image.

• 90° Image Rotation

The display image can be rotated in multiples of 90° (0°/90°/180°/270°).

• Free Image Rotation

Support image rotation at any angle when working with SmartLCT and the MCTRL R5 LED display controller.

#### Improvements to Maintainability

• Smart Module (dedicated firmware required)

Work with the smart module to support module ID management, storage of calibration coefficients and module parameters, monitoring of module temperature, voltage and flat cable communication status, and LED error detection

• Automatic Module Calibration

After a new module with flash memory is installed to replace the old one, the calibration coefficients stored in the flash memory can be automatically uploaded to the receiving card when it is powered on, which ensures unchanged uniform display brightness and chroma.

• Uploading Calibration Coefficients

Upload calibration coefficients to the receiving card quickly or in a stable manner, with acceleration support if needed.

• Module Flash Management

For modules with flash memory, the information stored can be managed, allowing for the storage and readback of calibration coefficients and module IDs.

• One-click to Apply Calibration Coefficients in Module Flash

For modules with flash memory, when the Ethernet cable is disconnected, users can hold down the self-test button on the cabinet to upload the calibration coefficients in the memory of the module to the receiving card.

Mapping 1.1

The cabinets can display the controller number, receiving card number, and Ethernet port information, allowing users to easily obtain the locations and connection topology of receiving cards.

• Settings of a Stored Image in the Receiving Card

The image displayed during startup, or displayed when the Ethernet cable is disconnected or there is no video signal can be customized.

• Temperature and Voltage Monitoring

The receiving card temperature and voltage can be monitored without using external devices.

Cabinet LCD

The LCD module of the cabinet can display the temperature, voltage, single run time and total run time of the receiving card.

Bit Error Detection

Real-time monitoring of the communication of the Ethernet port on the receiving card which helps users troubleshoot network communication problems.

• Status Detection of Dual Power Supplies

When two power supplies are used, their working status can be detected.

• Firmware Program Readback

The receiving card firmware program can be read back and saved to the local computer.

• Configuration Parameter Readback

The receiving card configuration parameters can be read back and saved to the local computer.

#### Improvements to Reliability

• Dual Card Backup and Status Monitoring

In an application requiring high reliability, two receiving cards can be mounted onto a single hub board for backup. When the primary card fails, the backup card can serve immediately to ensure uninterrupted operation of the display.

The working status of the primary and backup receiving cards can be monitored inNovaLCT V5.2.0 or later.

• Loop Backup

The receiving card and controller form a loop via the primary and backup line connections. When a fault occurs at a location of the lines, the screen can still display the image normally.

• Dual Backup of Configuration Parameters

The receiving card configuration parameters are stored in the application area and factory area of the receiving card at the same time. Users usually use the configuration parameters in the application area. If necessary, users can restore the configuration parameters in the factory area to the application area.

Dual Program Backup

Two copies of firmware program are stored in the receiving card at the factory to avoid the problem that the receiving card may get stuck abnormally during program update.

• Dual Backup of Calibration Coefficients

Brightness and chroma calibration coefficients are stored in the application area and factory area of the receiving card at the same time. Users usually use the calibration coefficients in the application area. If necessary, users can restore the calibration coefficients in the factory area to the application area.

### Appearance

All product pictures shown in this document are for illustration purpose only. Actual product may vary.

### Indicator

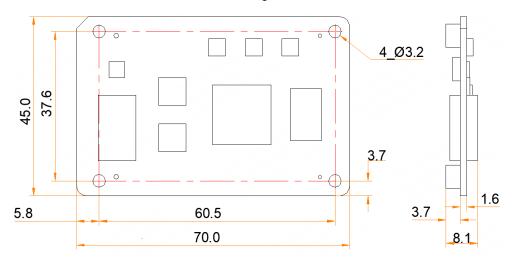

Indicators	Color	Status	Description
Running indicator	Green	Flashing once every 1s	The receiving card is functioning normally. Ethernet cable connection is normal, and video source input is available.
		Flashing once every 3s	Ethernet cable connection is abnormal.
		Flashing 3 times every 0.5s	Ethernet cable connection is normal, but video source input is unavailable.
		Flashing once every 0.2s	The receiving card failed to load the program in the application area and is now using the backup program.
		Flashing 8 times every 0.5s	A redundancy switchover occurred on the Ethernet port and the loop backup has

Indicators	Color	Status	Description
			taken effect.
Power indicator	Red	Always on	The power input is normal.

### **Dimensions**

The board thickness is not greater than 2.0 mm, and the total thickness (board thickness + thickness of components on the top and bottom sides) is not greater than 8.6 mm. Ground connection (GND) is enabled for mounting holes.

Tolerance: ±0.3 Unit: mm

🖹 Note

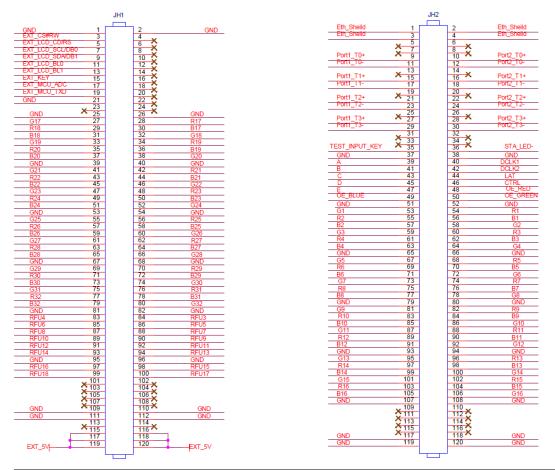

The distance between outer surfaces of the product and hub boards after their high-density connectors fit together is 5.0 mm. A 5.0 mm copper pillar is recommended.

To make molds or trepan mounting holes, please contact NovaStar for a higher-precision structural drawing.

#### 🖹 Note

The recommended power input is 5.0 V.

OE\_RED, OE\_GREEN and OE\_BLUE are display enable signals. When RGB are not controlled separately, use OE\_RED. When the PWM chip is used, they are used as GCLK signals. In the mode of 128 groups of serial data, Data65–Data128 are multiplexed into Data1–Data64, respectively.

#### Reference Design for Extended Functions

Pins for Ext	Pins for Extended Functions						
Pin	Recommended Smart Module Pin	Recommended Module Flash Pin	Description				
RFU3	HUB_CODE0	HUB_CODE0	Flash control pin 1				
RFU4	HUB_SPI_CLK	HUB_SPI_CLK	Clock signal of serial pin				
RFU5	HUB_CODE1	HUB_CODE1	Flash control pin 2				
RFU6	HUB_SPI_CS	HUB_SPI_CS	CS signal of serial pin				
RFU7	HUB_CODE2	HUB_CODE2	Flash control pin 3				
RFU8	/	HUB_SPI_MOSI	Module Flash data storage input				
	HUB_UART_TX	/	Smart module TX signal				
RFU9	HUB_CODE3	HUB_CODE3	Flash control pin 4				
RFU10	1	HUB_SPI_MISO	Module Flash data storage output				
	HUB_UART_RX	1	Smart module RX signal				
RFU11	HUB_H164_CSD	HUB_H164_CSD	74HC164 data signal				
RFU12	/	/	1				
RFU13	HUB_H164_CLK	HUB_H164_CLK	74HC164 clock signal				
RFU14	POWER_STA1	POWER_STA1	Dual power supply detection signal 1				
RFU15	MS_DATA	MS_DATA	Dual card backup connection signal				
RFU16	POWER_STA2	POWER_STA2	Dual power supply detection signal 2				
RFU17	MS_ID	MS_ID	Dual card backup identifier signal				
RFU18	HUB_CODE4	HUB_CODE4	Flash control pin 5				

#### 😑 Note

The RFU8 and RFU10 are signal multiplex extension pins. Only one pin from either the Recommended Smart Module Pin or the Recommended Module Flash Pin can be selected at the same time.

### **Specifications**

Maximum Resolution	• For PWM driver ICs,	s, the maximum load capacity per card is:			
	<ul> <li>512×384@60Hz (For 8bit video sources)</li> </ul>				
	- 512×256@60Hz (For 10bit and 12bit video sources)				
	• For common driver l	Cs, the maximum load capacity per card is:			
	– 384×384@60Hz	(For 8bit video sources)			
	– 384×256@60Hz	(For 10bit and 12bit video sources)			
Electrical Parameters	Input voltage	DC 3.8 V to 5.5 V			
	Rated current	0.6 A			
	Rated power consumption	3.0 W			
Operating	Temperature	-20°C to +70°C			
Environment	Humidity	10% RH to 90% RH, non-condensing			
Storage Environment	Temperature	-40°C to +85°C			
	Humidity	0% RH to 95% RH, non-condensing			
Physical	Dimensions	70.0 mm × 45.0 mm × 8.1 mm			
Specifications	Net weight	18.7 g			
		Note: It is the weight of a single receiving card only.			
Packing Information	Packaging	Each receiving card is packaged in a blister pack. Each packing box contains 80 receiving cards.			
	Packing box	392.0 mm × 200.0 mm × 123.0 mm			

The amount of current and power consumption may vary depending on various factors such as product settings, usage, and environment.
